The Clean Air Act at a Crossroads:

Turning 40, Confronting Climate Change

In 1970, the Clean Air Act ushered in an era of command and control pollution regulation and, for forty years, has served as the dynamic ground for innovative field-trials to solve public health and welfare problems. Over the years, the Clean Air Act has been implemented, and amended where necessary, to respond to changing threats, new technologies, and evolving policy perspectives. Today, the Clean Air Act is the primary existing law that addresses air pollution, including carbon dioxide emissions.

By examining the history and current incarnation of our original command and control environmental statute, conference participants will gain insights into effective regulatory frameworks and reflect on some of its clearest failures. The conference will examine the basic building blocks of the Clean Air Act and review these successes and failures over the years. It will discuss current issues and future tensions in air regulation, including whether and how the Clean Air Act will play a role in preventing catastrophic global climate change.

Thursday & Friday, April 22–23, 2010

Lewis & Clark College
Council Chamber, Templeton Student Center
0615 SW Palatine Hill Rd., Portland, Oregon

12.5 General MCLE Credits in Oregon
